Start date:	24/Aug/26		

Description

Steps to Reproduce:

1. Launch the game and load Level_01.

2. Navigate to Sector A (coordinates X: 1500, Y: 200).

3. Approach the corner where modular walls SM_Wall_01 and SM_Wall_02 intersect.

4. Observe the shadowed corner during the daytime lighting cycle.

Expected Result:

The interior corner is completely dark. Modular wall seams do not allow external directional light to pass through.

Actual Result:

A bright streak of light (Light Bleeding) from the Directional Light is visible at the exact seam of the modular walls.

Severity: Major

Environment: UE 5.8

Comments

Comment by Oleksandr Doroshkevych [24/Aug/26]

Fix Applied:

Increased Distance Field Resolution Scale on SM_Wall_01 and SM_Wall_02 from 1.0 to 2.5.

https://blackseacreator.atlassian.net/si/jira.issueviews:issue-html/UQBA-1/UQBA-1.html

1/2

- Re-snapped modular wall pivots on a 10cm grid to eliminate sub-pixel gaps between instances.
- Enabled two-sided distance field generation in Static Mesh settings to prevent thin-wall light bleeding.

Comment by [Oleksandr Doroshkevych](#) [24/Aug/26]

QA Verified:

- Checked seam lines under dynamic sun rotation and direct flashlight beam.
- No interior light bleed or shadow flickering observed in Sector A.
- Verified on Build: v0.4.1-dev. **Closed.**
